Pitchboard

Ethan Oles Personal Portfolio

My portfolio is a website that displays my abilities, experiences, and proof of my current and likelihood of future success in user related industries.

The portfolio will have different parts within it. One section provides the viewer with information about myself and what I look like. Including my education, experience, and other related information. Another section displays featured projects that I have completed related to my career aspirations. These will not be every single project but only the most important. Then there is a section with my resume and references from other individuals. All this information will be displayed in different locations within the portfolio site.

Personas
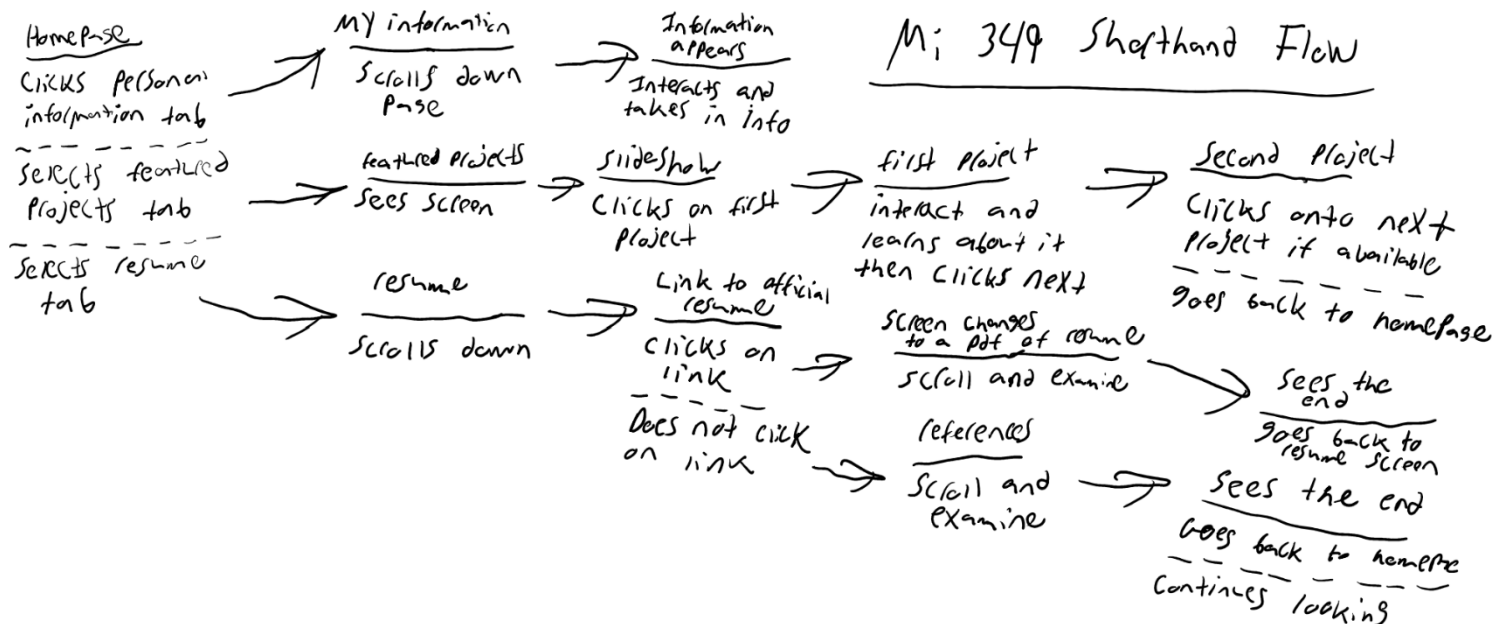

1. HR Managers
2. Company Employees
3. University Employees

Sees the end
Goes back to homepage
Continues looking

The shorthand flow essentially represents how I want this website to flow after it is completed. I want the user on the site to start at the home page. Then on the home page there will be 3 tabs or buttons representing my personal information, projects, and my resume. Once the user selects one the flow shows the process of going through each part of the website. This is just a first start, but I believe it represents the idea of the website fairly well.

Update on Shorthand Flow

Shorthand flow is mostly the same after completing the project, except there is no slideshow for featured projects and instead the user scrolls down and can click buttons to see the source of the projects. And for the resume instead of linking it I have attached it directly onto the website for easier access.
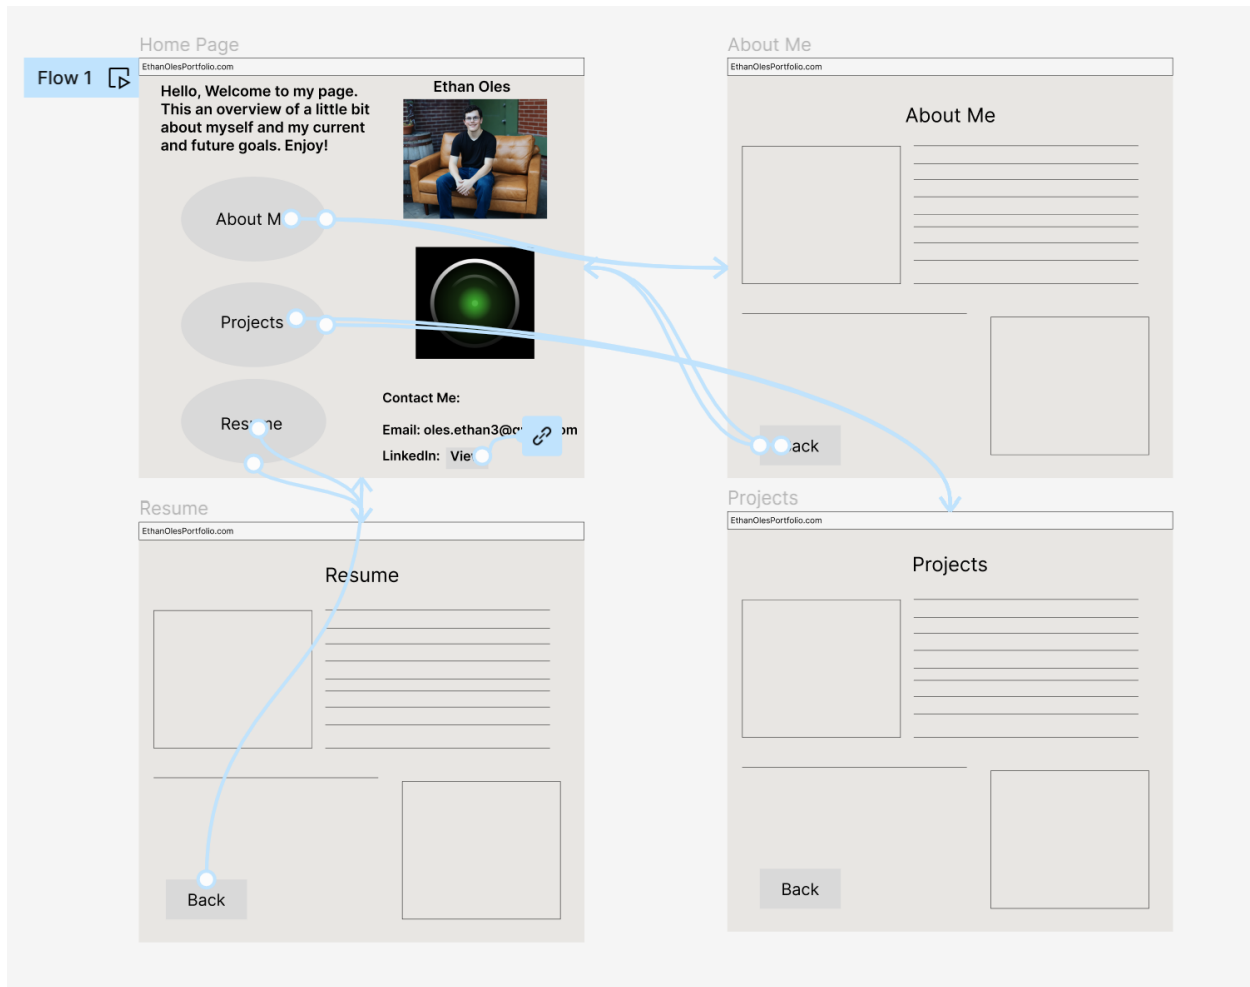

Pre-Production General Page Idea Wireframe

Represents my first idea of what I want the homepage to look like.

First Comp

 more detailed and finished idea of the original wireframe.

A working prototype that includes buttons that go to other pages and back to the home screen. The other pages will be completed and are there right now to show the functionality of the buttons.

Final Comp Based Off Wireframe Layout For All Pages
